

# Email Client vs. Email Service

## Email Client

- Use with any Email Service Provider
- Designed for Usability
- Requirements: need to be on every Device for the same experience

## Email Provider (Service)

- Associated with the company (ATT, Comcast, Google, AOL...)
- Has Both an interface and provides the service
- May or may not integrate with additional providers

# IMAP vs. Pop 3

- IMAP – keeps data with service provider, view same content on different devices, delete on one, delete on all
- Pop3 – downloads to email client and device, need to delete on
